

Amendments to the Specification:

Please replace paragraph [0039] with the following amended paragraph:

[0039] An “Entitlement Management Message” (EMM) may be used to deliver entitlements (sometimes referred to as “privileges”) to the digital receiver 111. Examples of certain entitlements may include, but are not limited to access rights, access parameters, and/or descrambling keys. A descrambling key is generally a code that is required by descrambler logic to recover data in the clear from a scrambled format based on the entitlements granted. Finally, “content” in the program data stream may include images, audio, video or any combination thereof. The content may be in a scrambled or clear format.
